## Abstracts

Glacial Methacrylic Acid is a refined grade of methacrylic acid and comprises of monomethyl ether of hydroquinone (as inhibitor). Glacial methacrylic acid is available in the form of clear as well as colourless liquid. It is used as an intermediate in the production of methacrylic acid esters, which is further used in the production of wide range of plastic products. Glacial methacrylic acid is also used in the production of polymers and also as an additive in specialty esters. They exhibit properties such as clarity and good weatherability. Glacial methacrylic acid polymerizes very easily, and is used in the production of copolymers and homopolymers. When glacial methacrylic acid is incorporated into copolymers, it reduces the hardness by lowering the softening temperature.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Glacial Methacrylic Acid market covering all its essential aspects.
