Abstracts

Glacial Methacrylic Acid is a refined grade of methacrylic acid and comprises of monomethyl ether of hydroquinone (as inhibitor). Glacial methacrylic acid is available in the form of clear as well as colourless liquid. It is used as an intermediate in the production of methacrylic acid esters, which is further used in the production of wide range of plastic products. Glacial methacrylic acid is also used in the production of polymers and also as an additive in specialty esters. They exhibit properties such as clarity and good weatherability. Glacial methacrylic acid polymerizes very easily, and is used in the production of copolymers and homopolymers. When glacial methacrylic acid is incorporated into copolymers, it reduces the hardness by lowering the softening temperature.

Based on the Glacial Methacrylic Acid market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
