### **Abstracts**

The glass bead retro reflective material has good retro reflection effect. Its bright reflection effect can effectively enhance the visibility of objects in the dark environment. The diameter of glass beads, the number of microspheres on the surface of the reflective fabric, and the covering area of the surface microspheres have great influence on the retro reflection. When the diameter of the glass bead is larger than the surface of the surface, the retro reflection coefficient increases, and the retro reflection properties of the reflective fabric can be improved.
