Abstracts

Glass is a common material and found in various applications – from windows and doors to glass staircases, balconies and other architectural products. On a smaller scale, items such as kitchenware, artwork, jewellery and lenses also make use of this versatile, clear material. There are many benefits of bonding glass with industrial adhesives: Many adhesives are clear and non-yellowing – offering an “invisible” bond that is more attractive than mechanical fixtures and fastenings; Less machining required – no need to drill holes to accommodate mechanical fixings = less risk of breakage through extra handling. Drilling holes adds a weak area to the glass and often stress is concentrated into this weak area (think about the tiny hole where the arm is fixed on frameless spectacles – this often cracks around it); Faster joining process than drilling and using a mechanical fastener – glass can be joined in seconds. Less skill required than machining holes in glass; Joints are sealed as well as structurally bonded.
