Abstracts

Ethoxylate is a chemical compound which is produced using the carcinogen-ethylene oxide. It is primary non-ionic surfactants, and is the second-largest downstream sector of ethylene oxide (EO) after ethylene glycols. Glyceride ethoxylate is a type of ethoxylate. Glyceride or acyl glycerol is an ester of glycerol and fatty acids. It is a nonionic surfactant that is used as humectants for preparing cosmetics and personal care products, as they add body and texture to materials. Glyceride ethoxylates are also used in variety of other applications, such as cleansing, wetting surfaces, foaming, and emulsifying. Being non-ionic surfactants, glyceride ethoxylates have excellent grease removing properties that make them suitable to be used in laundry products, household cleaners, and dishwashing liquids. Glyceride ethoxylates are widely used in manufacturing products such as domestic detergents, household & personal care products, and industrial & institutional cleaning products.
