## Abstracts

GMO seeds offer premium characteristics to increase agricultural output, enable longer shelf life, and offer greater resistance to insects. Manufacturers of GMO crops and seeds are developing new GM crops that not only offer resistance to pests and diseases, but also offer increased tolerance to herbicides such as vitamin A-fortified rice and wheat, pesticides such as cowpea and beans, and drought tolerant biofortified bananas and maize. GMO crops and seeds are not proven to be harmful to humans, but research suggests that modified crops may negatively impact food chains and the environment. These factors have led to a mixed response among farmers about the adoption of GMO crops and seeds.

The GMO Crops and Seeds market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
