Abstracts

Graphene is a one-atom-thick layer of carbon atoms arranged in a hexagonal lattice. It is the building-block of Graphite, but graphene is a remarkable substance on its own - with a multitude of astonishing properties. Graphene could present several new features for energy-storage devices, such as smaller capacitors, completely flexible and even rollable energy-storage devices, transparent batteries, and high-capacity and fast-charging devices. Graphene is also very useful in a wide range of batteries including redox flow, metal–air, lithium–sulfur and, more importantly, lithium-ion batteries.

Graphene can be chemically processed into various forms suitable for both the positive and negative electrodes, enabling the fabrication of an all-graphene battery with an ultrahigh energy density.

Based on the Graphene for Battery market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
