## Abstracts

Hadoop is a distributed system infrastructure developed by the Apache Foundation. Users can develop distributed programs without knowing the underlying details of the distribution. Take full advantage of the power of the cluster for high-speed computing and storage. Hadoop implements a distributed file system (Hadoop Distributed File System), referred to as HDFS. HDFS is highly fault-tolerant and designed to be deployed on low-cost hardware; it also provides high throughput to access application data for applications with very large data sets. . HDFS relaxes the requirements of POSIX and can stream access data in file systems. The core design of Hadoop's framework is HDFS and MapReduce. HDFS provides storage for massive amounts of data, while MapReduce provides calculations for massive amounts of data. Hadoop Distribution is a commercialization of Hadoop, but some are open source.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Hadoop Distribution market covering all its essential aspects.
