Abstracts

A Hall-effect thruster system generally consists of a thruster (thruster body + cathode), PPU (power supply), and flow controller (Flow Controller). Furthermore, the entire propulsion system may include valves (Propellant Management Assembly / System) including the tank and pressure control system. The Hall Effect Technology has been used for decades and equips most of the large satellite's thrusters, because it combines the high impulse of electric propulsion technology along with a very high thrust-to-power ratio.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Hall-effect Thruster System for Satellite market covering all its essential aspects.
