## Abstracts

Hand disinfectant refers to a disinfectant used for disinfection of hand skin to reduce hand microorganisms and make it harmless. Contact transmission is one of the most common ways of pathogen transmission. In the process of contact transmission, hands are the most important transmission media. When touching viruses, blood, body fluids or contaminated objects, microorganisms can be easily transmitted to each other by hands. Hand disinfectants are the simplest, convenient, economical and effective way to clean hands and prevent infections caused by microorganisms. Good hand disinfection can prevent up to 70% of infectious diseases from happening. Therefore, hand disinfectants play a vital role in daily life and medical care.
