## Abstracts

Dredging is the removal of material from a portion of the water environment and repositioning it to another part. Except for a few cases, excavation work is carried out by professional floating plants called dredgers. Dredging is carried out in many different places and for many different purposes, but the main purpose is usually to recycle materials of a certain value or use, or to create greater water depths. Port deepening is the service required for excavation activities, especially in ports and ports for various purposes. Port deepening found its application in capital deepening, trade maintenance, urban development and coastal protection.
