Abstracts

Head-up display refers to a display device that projects the main driving instrument attitude guidance indicator and main flight parameters onto the driver's helmet front or windshield. This allows the driver to see the main driving instrument and its important flight parameters simultaneously while looking straight ahead of the machine. This was developed by military aircraft. The military aircraft generally uses a helmet-type head-up display, which is convenient for driving the aircraft while searching for targets. Civil aviation aircraft have also begun to use, generally using a head-up display on the projection windshield, mainly for approach landing.

Based on the Head-Up Display (Hud) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
