Application programming interfaces (APIs) provide the means for one software program to access the services of another. Given the healthcare industry's history with closed health IT systems and siloed data stores, many subject-matter experts and innovators continue to tout the potential of widespread API use in healthcare to enable health data exchange and interoperability. In a health care market where APIs are commonplace, patients could have easy, efficient access to their own data, which would help them understand their own health and make more informed choices.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Healthcare API market covering all its essential aspects.
