## Abstracts

Heat Shrink Tubing can be made of any one of a range of thermoplastics, including polyolefin, polyvinyl chloride (PVC), Viton (for high-temp and corrosive environments), Neoprene, polytetrafluoroethylene (PTFE), fluorinated ethylene propylene (FEP) and Kynar. In addition to these polymers, some types of special-application heat shrink can also include an adhesive lining that helps to bond the tubing to underlying cables and connectors, forming strong seals that can often be waterproof. Another material that is sometimes added to heat shrink tubing is conductive polymer thick film, which provides an electrical connection between the two or more conductive objects that are being joined by the tubing – without the need to solder them first.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Heat-Shrinkable Tubing market covering all its essential aspects.
