Abstracts

Heat Shrink Tubing can be made of any one of a range of thermoplastics, including polyolefin, polyvinyl chloride (PVC), Viton (for high-temp and corrosive environments), Neoprene, polytetrafluoroethylene (PTFE), fluorinated ethylene propylene (FEP) and Kynar. In addition to these polymers, some types of special-application heat shrink can also include an adhesive lining that helps to bond the tubing to underlying cables and connectors, forming strong seals that can often be waterproof. Another material that is sometimes added to heat shrink tubing is conductive polymer thick film, which provides an electrical connection between the two or more conductive objects that are being joined by the tubing – without the need to solder them first.

Based on the Heat-Shrinkable Tubing market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
