Abstracts

In general, there are two dielectric materials for the Heat Transfer Film. One of the media materials is PET, and the other is PVC. The Heat Transfer Film is a one-time heating process, and the pattern on the thermal transfer film is transferred onto the surface of the material to be decorated to form a high-quality decorative film. In the Heat Transfer process, the protective layer and the pattern layer are separated from the dielectric material film by the combined action of heat and pressure, and the hot melt adhesive is the key to permanently bonding the entire decorative layer to the substrate.

Based on the Heat Transfer Film market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
