Abstracts

Heavy fuel oil, also known as residual fuel oil, is a by-product of the crude oil refining process. Heavy fuel oil contains residual distillation and subsequent cracking of the crude oil, which allows it to be obtained at a lower cost. Heavy fuel oil has many layers, so it should be used, maintained and stored at high temperatures. Heavy fuel oil generators are less expensive than other generators because of the availability and low cost of heavy fuel oil used. They are mainly used in marine engines because of their small size. In addition to marine engines, they are also used in power boilers and railways.

Based on the Heavy Fuel Oil (HFO) Generators market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
