Abstracts

Hemodialysis and peritoneal dialysis are essential treatments for people with chronic kidney disease and acute kidney injury. Both hemodialysis and peritoneal dialysis procedures help the kidneys filter and remove waste and extra fluids from the body. Hemodialysis helps remove waste such as urea from the blood while using a special filter called an artificial kidney to maintain an appropriate balance of electrolytes in the blood. The peritoneal dialysis procedure utilizes the abdominal lining to filter the blood of a person with renal failure.
