Abstracts

The potential applications of High Altitude Pseudo Satellites, also called High Altitude Platform Stations (HAPS). HAPS are aircraft positioned above 20 km altitude, in the stratosphere, for very-long-duration flights counted in months and years. These unmanned aircraft may be airplanes, airships or balloons. HAPS could offer advantages and complementary applications over satellites, terrestrial infrastructures and Remotely Piloted Aircraft Systems (RPAS), at relatively low cost.

Based on the High-altitude Pseudo Satellites (HAPS) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
