Abstracts

High molecular weight polyisobutene is a solid rubberlike substance; it retains its resilient and high elastic properties and belongs to 'the elastomers' in contrast to such polyolefines as polyethylene, polypropylene, polybutene, which belong to 'thermoelastoplasts'.

High molecular weight polyisobutene is a product of the method of low temperature polymerization with evaporating liquid ethylene and in presence of catalyst boron trifluoride and together with the process regulators.

Polyisobutene is a saturated carbon-chain polymer. As such it is highly resistant to oxygen, ozone, and solutions of acids, alkalis and salts. The polymer doesn't swell or dissolve in oxygen containing polar solvents, but readily dissolved in aliphatic or aromatic hydrocarbons (passing through a swelling stage).

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the High Molecular Weight Polyisobutylene market covering all its essential aspects.
