Abstracts

High pressure processing (HPP) technology is widely used in the food industry for sterilization purposes. HPP, also known as pascalization, is similar to pasteurization of milk. During this process, the food is exposed to the maximum level of isostatic pressure exerted by the water. This high pressure eliminates bacteria, viruses and other organisms that can degrade food, thereby increasing food safety and shelf life.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the High Pressure Processing Equipment market covering all its essential aspects.

For the competitive landscape, the report also introduces players in the industry from the perspective of the market share, concentration ratio, etc., and describes the leading companies in detail, with which the readers can get a better idea of their competitors and acquire an in-depth understanding of the competitive situation.
