Abstracts

Gases having more than 99.99% concentration are known as High Purity gases. High Purity gases are most commonly used in applications where impurity control is imperative. In high purity gases, the impurity content level is usually below 0.1 ppm. Generally, high purity gases, such as hydrogen, nitrogen, oxygen, helium, krypton and argon, among others, are classified into four groups i.e. pure gases, hydrocarbon bases gases, rare gases and miscellaneous gases. High purity gases can be manufactured through several manufacturing methods, such as cryogenic-liquefaction & air fractional distillation, pressure swing adsorption using molecular sieves, hydrocarbon steam reforming process and purification of purge gas, among others.

Based on the High Purity Gas market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
