Abstracts

High-purity SiC powder is a silicon carbide product with a purity of 2N and above. High purity silicon carbide (SiC) powder is a lightweight ceramic material with high strength properties comparable to diamond. It has excellent thermal conductivity, low thermal expansion, and is resistant to corrosion from acids. Silicon carbide is an excellent ceramic material for applications requiring good erosion and abrasive resistance. The characteristics of silicon carbide such as higher breakdown electric field strength, wider band gap, lower thermal expansion, and resistance to chemical reaction, enable it to gain an edge over traditional silicon semiconductors in the power semiconductors sector.
