Abstracts

A backplane (or 'backplane system') is a group of electrical connectors in parallel with each other, so that each pin of each connector is linked to the same relative pin of all the other connectors, forming a computer bus. It is used as a backbone to connect several printed circuit boards together to make up a complete computer system. Backplanes commonly use a printed circuit board, but wire-wrapped backplanes have also been used in minicomputers and high-reliability applications.

The emergence of faster data rates, and decreasing signal rise times, requires better performing, high speed connectors. High speed backplane connectors provides system designers the flexibility they require to solve their

specific performance challenges.

Based on the High-Speed Backplane Connectors market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
