Abstracts

High Voltage Direct Current (HVDC) power is fast gaining popularity and increased adoption ever since the first test line was developed in Sweden more than seventy years ago. Since then, major technological changes and cutting-edge research has taken place the world over to refine the HVDC VSC technology. As it is rightly said, necessity is the mother of invention, and this new technology was long overdue because of the inherent drawbacks of the conventional AC grid. The status quo in power transmission has been challenged by major developments in the market such as increased generation of power by renewable energy, new requirements from the power market and the deteriorating environmental impact. However, the new HVDC technology based on the Voltage Source Converter (VSC) is an attractive way of transmitting electricity that can overcome all the challenges listed above. The HVDC VSC technology for transmission gives independent control of active and reactive power and the reaction time for response in cases where it is needed is also fast. In addition, future technological developments have ensured that power transmission companies capitalise on the advantages this technology offers and eliminate the drawbacks such as high losses.

Based on the High Voltage Direct Current (HVDC) Cable market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes

in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
