Abstracts

High Voltage Gas Insulated Switchgear (GIS) refer to rated voltage over 52KV.

GIS is a kind of metal enclosed switchgear. That means, all the equipment of the electrical switchgear is enclosed by gas tight metal enclosure and SF6 gas is used as insulation between live parts of the equipment and earthed metal enclosure. For establishing electrical substation in very limited place this type of SF6 insulated electrical switchgear plays the major role.

In gas insulated medium voltage switchgear, vacuum technology is used as interrupting purpose and SF6 gas is used as insulation material. Although for both interruption and insulation, SF6 gas is used in many medium voltage GIS systems. But for such equipment rated SF6 gas pressures are different for interruption and insulation. SF6 gas pressure for insulating purpose is generally kept below 2.5 bar whereas SF6 gas pressure for interrupting purpose is ranged from 5 bar to 7 bar.
