## Abstracts

High-modulus polyethylene (HMPE) fibre is produced by gel spinning ultra-high molecular weight polyethylene (UHMWPE). HMPE is comprised of extremely long molecules (chains) of polyethylene oriented in the same direction, which results in large areas of overlap between the molecules. This overlap greatly increases the bond between the molecules and thereby, the strength of the fibre is greatly increased. When rope is manufactured using this fibre, extremely high strengths can be achieved. Dyneema® is the premium brand for High Modulus Polyethylene fibre.
