Abstracts

Tonometer is an instrument used for the determination of the intraocular pressure or the pressure of the fluid within the eye. Tonometry is a diagnostic test primarily used to detect glaucoma. Glaucoma is an eye disease in which the optic nerve is damaged. The buildup of the pressure of the extra fluid inside the eye damages the optic nerve, and if this is left unattended, it may first cause peripheral vision loss and could lead to permanent loss of vision. Tonometer is equipped to measure the intraocular pressure by determining the resistance of the cornea to indentation.
