Abstracts

Host cell proteins (HCPs) are process-related impurities, expressed by the host cell used for production of biopharmaceutical proteins. During the purification process, the majority of the HCPs are removed (>99%), but small HCP amounts remain in the distributed products, such as monoclonal antibodies (mAbs), antibody-drug-conjugates (ADCs), therapeutic proteins, vaccines, and other protein-based biopharmaceuticals. Based on the Host Cell Protein Testing market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
