## Abstracts

Human enhancement is the concept of applying science and technology to extend the cognitive and physical human capabilities. It is very tempting to promote smart children, faster and stronger athletes, more attractive physical characteristics and improved human skills. Today, we have been bombarded with information that reinforces the notion that personal self-improvement can be achieved at any time through the enhancements of drugs, dietary supplements and cosmetic surgery.

For many, the enhancements promised by new and more powerful technologies will be seen as a reasonable extension of today's ubiquity, and it is increasingly difficult to draw a line between its use for therapeutic purposes and its use for reinforcement. .

Human enhancement technology is not only for the treatment of diseases and disabilities, but also for the enhancement of human quality. In some academic circles, human enhancement technology means emerging technologies and convergence technologies. At other times it is roughly synonymous with human genetic engineering. More generally, it refers to the combination of nanotechnology, biotechnology, information technology, and cognitive science to improve human function.
