Abstracts

Human milk oligosaccharides are sugar molecules, that are part of the oligosaccharides group and which can be found in high concentrations exclusively in human breast milk. Human milk oligosaccharides form the third most abundant solid component of human milk after lactose and fat. HMOs are present in a concentration of 0.35 - 0.88 oz / L.

Human milk oligosaccharides (HMOs) are a family of structurally diverse unconjugated glycan's that are found in and unique to human breast milk, despite not actually being digestible by human infants. HMOs function as a prebiotic helping to establish commensal bacteria. HMOs also function as anti-adhesives that help prevent the attachment of microbial pathogens to mucosal surfaces
