Abstracts

The Hybrid Memory Cube (HMC) is the high-performance RAM interface through-silicon via (TSV) technology by connecting the multiple memory arrays to the top of one another. It uses standard DRAM cells for memory implementation. The High-bandwidth Memory (HBM) is also the RAM interface but for 3D stacked SDRAM. It is used in combination with network devices and graphic accelerators. Both memory bus is capable of providing the higher bandwidth with lower power consumption. It is widely applicable in graphics designing, in the field of networking, and others. HMC and HBM are appropriate for Big Data applications since they offer super quick stockpiling execution. These advancements additionally adequately address the presentation, transfer speed, and perseverance necessities of Big Data applications.
