Abstracts

Hybrid Non-Isocyanate Polyurethanes (HNIPU) has excellent properties. They have an improved structure, reduced permeability, higher hydrolytic stability, excellent adhesion, and excellent chemical resistance. Due to these characteristics, HNIPU is ideal for many applications, such as crack resistant composites, chemical resistant coatings, industrial flooring, sealants, glues, etc. The synthesis of HNIPU is safe and easy. Unlike conventional polyurethanes, HNIPU does not use isocyanates at any stage of production. Isocyanates are a key component used in the production of conventional polyurethane products such as coatings and foams.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Hybrid Non-Isocyanate Polyurethanes (HNIPU) market covering all its essential aspects.
