Abstracts

Hybrid Non-Isocyanate Polyurethanes (HNIPU) has excellent properties. They have an improved structure, reduced permeability, higher hydrolytic stability, excellent adhesion, and excellent chemical resistance. Due to these characteristics, HNIPU is ideal for many applications, such as crack resistant composites, chemical resistant coatings, industrial flooring, sealants, glues, etc. The synthesis of HNIPU is safe and easy. Unlike conventional polyurethanes, HNIPU does not use isocyanates at any stage of production. Isocyanates are a key component used in the production of conventional polyurethane products such as coatings and foams.

Based on the Hybrid Non-Isocyanate Polyurethanes (HNIPU) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
