Abstracts

Hydraulic Brakes for motor vehicles have improved much over the years and now form the basis of the stopping system on almost every car, truck, motorcycle and ATV. Hydraulic brakes provides leverage ratios far higher than mechanical brake systems, they are compact and easy to maintain and service and do not suffer from wear in linkages etc. The brake fluids used in hydraulic brakes must be changed and flushed periodically as most hydraulic brakes use glycol fluids which are hygroscopic which means they absorb moisture. Another great advantage of hydraulic brakes is that flexible, even rubber fluid transfer lines can be used making it easy to route the hydraulics around hard to reach areas on a vehicle. Some rubber lines or hoses in hydraulic brakes are braided with steel casing to allow them to accept higher line pressures and the prevent chafing of the rubber lines inside.

The Hydraulic Brake market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
