Abstracts

A hydraulic press is a machine that uses liquid as a working medium and is based on the Pascal principle to transfer energy to achieve various processes. The hydraulic machine is generally composed of three parts: the machine (main unit), the power system and the hydraulic control system. Hydraulic machines are classified into valve hydraulic machines, liquid hydraulic machines, and engineering hydraulic machines. The hot stamping forming technology utilizes the principle of metal thermoplastic forming, which can realize the quenching heat treatment of the sheet material at the same time of forming, improve the forming property of the material, and greatly expand the application range of high-strength ultra-high-strength steel in automobile parts.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Hydraulic Press and Hot Stamping market covering all its essential aspects.
