## Abstracts

Hydrocarbons are called natural refrigerants because they occur in the earth's material cycle, e.g. as a byproduct of natural gas production, or in oil refineries. They were first used as refrigerants in the early 1920s, but replaced by fully and partially halogenated fluorinated hydrocarbons in the early 1950s (CFC/ HFC). Being non-toxic and non-flammable, these substances were often referred to as 'safety refrigerants'. Meanwhile, it has become generally known that CFC and HCFC have a fatal effect on the environment and the global climate, resulting in them being banned.

Based on the Hydrocarbon Refrigerant market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
