Abstracts

Diamond Like Carbon (DLC) coatings are widely used in automotive applications for their excellent features for tribological purposes. The friction coefficient of DLC coatings is low and the material is non-sticking. Depending on the technology used to deposit the coating (sputtering, PACVD, arc evaporation), the features can be adapted to the application. DLC coating is very suitable for coating drills, inserts, end mills, saw blades, taps, punches, (plastic) moulds and dies. Apart from its use in machining aluminium, DLC coating can also be used on tools for machining other non-ferrous metals and plastics.
