Abstracts

Hyperloop is a conceptual high-speed transportation system, the route of which was initially proposed from Los Angeles to San Francisco. This technology is a pod-like vehicle, which operates through a reduced pressure tube, potentially exceeding airliner speeds. The average travelling speed is expected to be 600 mph with a maximum speed of 760 mph. Passenger and freight are loaded into the hyperloop, and accelerate gradually through electric propulsion via a low-pressure tube.

Based on the Hyperloop Technology market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
