Abstracts

The Hypoxia Incubator Chamber is a self-contained and sealed chamber that fits inside existing laboratory incubators. Each unit utilizes a surface-type seal in which all portions of the O-ring are uniformly compressed by a ring clamp for a reliable, air-tight seal. The cylindrical walls and semi-spherical top and bottom minimize gas flow resistance and eliminate dead space during initial purging. The chambers have an integrated stacking feature for storage during or after experimentation. All units are molded from high quality polycarbonate and will not break, crack or cloud with extended use.
