## **Abstracts**

Intracranial atherosclerotic disease (ICAD) is the most common cause of stroke worldwide. It is the progressive narrowing of the cerebral arteries within the skull (intracranial). Strokes may be caused either by clots or by bleeding (hemorrhage) that deprives brain cells of oxygen, leading to their death. About Intracranial atherosclerotic disease, it has been identified that it can start at a young age and progress slowly. It may not cause any symptoms until the arteries are narrow enough to reduce blood flow to the brain. Because this disease often progresses unnoticed, the first symptoms may occur during a temporary blockage of blood flow to the brain.

Based on the ICAD (Intracranial Atherosclerotic Disease) Pathology market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
