Abstracts

Insulated Gate Bipolar Transistors (IGBTs) combine an easily driven MOS gate with low conduction loss. They are the device of choice for high current and high voltage applications. IGBT manufacturers must balance tradeoffs between switching speed, conduction loss, and ruggedness so the devices provide higher frequency and higher efficiency. IGBTs also have high input impedance. This makes them popular in DC and AC motor drives, UPS systems, power supplies, and renewable energy (PV and wind). They have lower gate drive requirements and lower switching losses, making them more efficient at smaller sizes and lower costs.

Based on the IGBT Module market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
