Abstracts

An angiographic or diagnostic catheter is intended for use in angiographic procedures. It delivers radiopaque media and therapeutic agents to selected sites in the vascular system. It is also used to lead a guidewire or a catheter to the target site. The Outlook 4 Fr (1.40 mm) has a large lumen to allow contrast media to be injected at high flow rates and is designed to exhibit good torque control. The catheter inserter on the pigtail catheter can be used to straighten the catheter tip for easier insertion into the sheath. After catheter insertion, it can be peeled off the catheter. Fixed strain relief prevents the catheter from kinking at its proximal end.

Based on the Imaging Diagnostic Catheter market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail.
