## Abstracts

IMSI Catcher (an international mobile subscriber identity-catcher), refers to a type of electronic surveillance equipment that collects information about nearby mobile devices. This is done either passively, by intercepting the radio signals already being transmitted between a mobile device (such as a mobile phone) and a mobile base-station (cell tower); or actively, by presenting itself to nearby mobile communication devices as a legitimate mobile base-station, thereby fooling devices to connect to the IMSI-catcher itself allowing further interception of information from the devices.
