Abstracts

A smartphone comprises a cellular phone, communication device[a] , and handheld personal computer. Unlike feature phones and 'basic' cellular phones, smartphones provide extensive computing capabilities including numerous third party software applications (mobile apps) acquired through an app store. Unlike basic cellular phones and most feature phones, smartphones also come with support for high speed access to the internet over both mobile broadband (usually Long-Term Evolution (LTE)) and Wi-Fi. Like basic and feature phones, smartphones are generally used with a cellular network connection to transmit voice. Like feature phones and some basic phones, smartphones support short message service (SMS).

Based on the India Smartphone market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
