Abstracts

Hydrogen peroxide is a non-polluting oxidizing agent -- as its oxidation by-product is water -- and hence, could be commercially looked as a potential eco-friendly oxidizing agent. Hydrogen peroxide, as an oxidizing agent, does not cause any release of gases or other chemical residues. Besides, it also displays versatility in context of its applications. For instance, it has the ability to treat both easy-to-oxidize pollutants (iron and sulphides) as well as treat pollutants which are difficult to oxidize (solvents, gasoline and pesticides). The fact that hydrogen peroxide's power can be adjusted in multiple ways (by merely adjusting chemical reaction conditions such as dosage, catalyst usage, reaction time, temperature and pH) increases its diversity, thereby making it a key chemical to be studied from a market perspective.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Industrial Hydrogen Peroxide market covering all its essential aspects.
