## Abstracts

Their performance is only possible because of these additives, the content of which may vary from under 1% for some industrial oils to more than 25% for certain metalworking lubricants. These additives are designed either to enhance the lubricants' intrinsic properties, like resistance to oxidization, wear, friction or corrosion, or to add properties they do not possess naturally, such as detergency, dispersive power or alkalinity—with a view to neutralizing acid compounds— or even 'extreme pressure' properties
