Abstracts

With inkjet backlit film, you can create stunning, illuminated displays. Many wide format backlit film products feature a translucent, light-diffusing layer that keeps “hot spots” from the light sources from ruining the look of the printed graphics. Most inkjet backlit film is designed for traditional front-printing. A few specialty backlit films are designed for reverse printing on the back of the film, so that the polyester film itself protects the printed graphics (like a built-in laminating film). Some inkjet wide format backlit film produces prints that are bright enough to be easily readable even when the lightbox or kiosk is turned off.
