## Abstracts

Inorganic flame retardant is composed of a high temperature resistant solution added to the ultrafine inorganic metal oxide for fine processing. The inorganic flame retardant mainly adds the inorganic element having intrinsic flame retardancy to the flame-retardant substrate in the form of a simple substance or a compound, and is sufficiently mixed with the polymer in a physically dispersed state, and passes through the chemical or the gas phase or the condensed phase. Physical changes play a flame retardant role.
