Abstracts

Pheromone are the chemical molecules secreted by insects in the environment. The pheromones are released to signal their other mates for a food source or as an alert. Thus, these pheromones act as a communication between the insects spread across the field. Integrated pest management (IPM) is a method or approach towards preventing damage from pests in the farm field. IPM pheromones are synthetically manufactured which exactly imitates the naturally secreted pheromones. Thus, it helps in growing the crops in a healthy manner. The pheromones can be classified based on the interaction medium as aggregation, alarm or sex pheromones. IPM pheromones create an unfavourable situation for the further growth of pest. The IPM pheromones are used in one of the four control approaches as biological control, cultural control, mechanical and physical control and chemical control. The chemicals used for manufacturing of pheromones are semiochemicals. Depending on the pest type such as moth, beetles etc. the pheromones are manufactured specifically for that type of pest. The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Integrated Pest Management (IPM) Pheromones market covering all its essential aspects.
